PDW

Psychological Foundations of Management 2.0:

CORE SELF-EVALUATION, HUBRIS, AND HUMILITY

When does the “bright side” of hubristic CEO emerge? What is the “dark side” of CEO humility? How do business owners and entrepreneurs’ core self-evaluations have some bearings on success and failure of new ventures? Answers to these questions are instrumental in shaping more effective strategic and entrepreneurial decision processes. Beyond the outstanding scholars’ presentations, the PDW features a set of roundtable interactions. **Participants to the roundtables are invited to submit the works that they like to discuss at <http://www.aom2016.unict.it>**

The deadline for registration is **July 1, 2016.**

Saturday, August 6, 2016

10:45-1:15 - Hilton Anaheim, Catalina 5

K.T. Haynes
U. of Delaware

Psychological Heuristics and Biases In Management: EXECUTIVES' PERSONALITY TRAITS AND CORE SELF-EVALUATIONS

M. A. Hitt,
Texas A&M U.
Texas Christian U.

The symposium brings together a panel of outstanding scholars who jointly explore the following questions: What is the impact of executive core self-evaluation on firm performance? Are the effects of psychological heuristics and biases of leadership different in short term and long run? How do different organizational and environmental settings change extant relationships? What are the executives' psychological heuristics that shape their job satisfaction and, in turn, affect organizational choices and performance? What is the role that leader traits play in the relationship between leaders' capabilities and firm performance?
